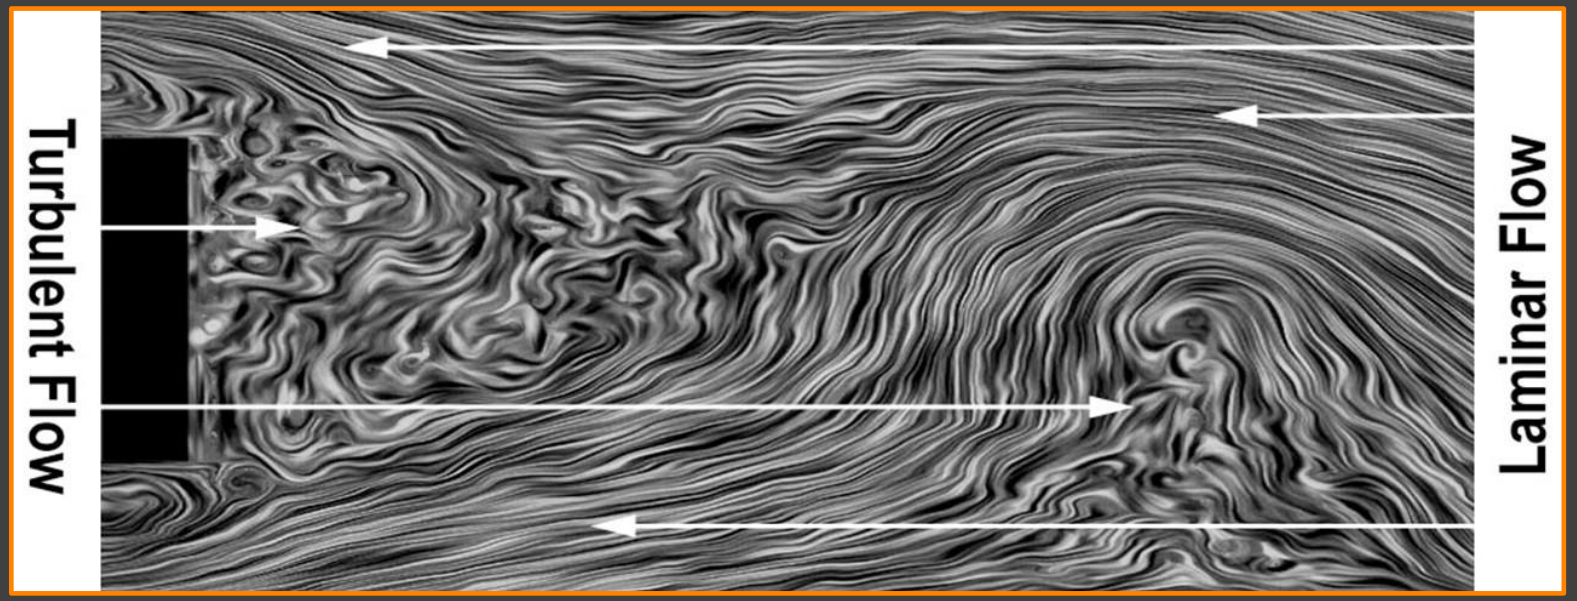
Report on our CanSat experiment

by OnionSAT

05-06/04/2024, Tatárszentgyörgy

Mission targets

- Primary:
  - Temperature
  - Pressure
- Secondary:
  - Turbulent flows
  - Direction and magnitude of airflows
  - Relative humidity



Source: https://performativedesign.com/definition/air-flow-coefficient/

OnionSAT Structure

SD card module

GPS sensor

LoRa module

Tem.Pres.Hum. sensor

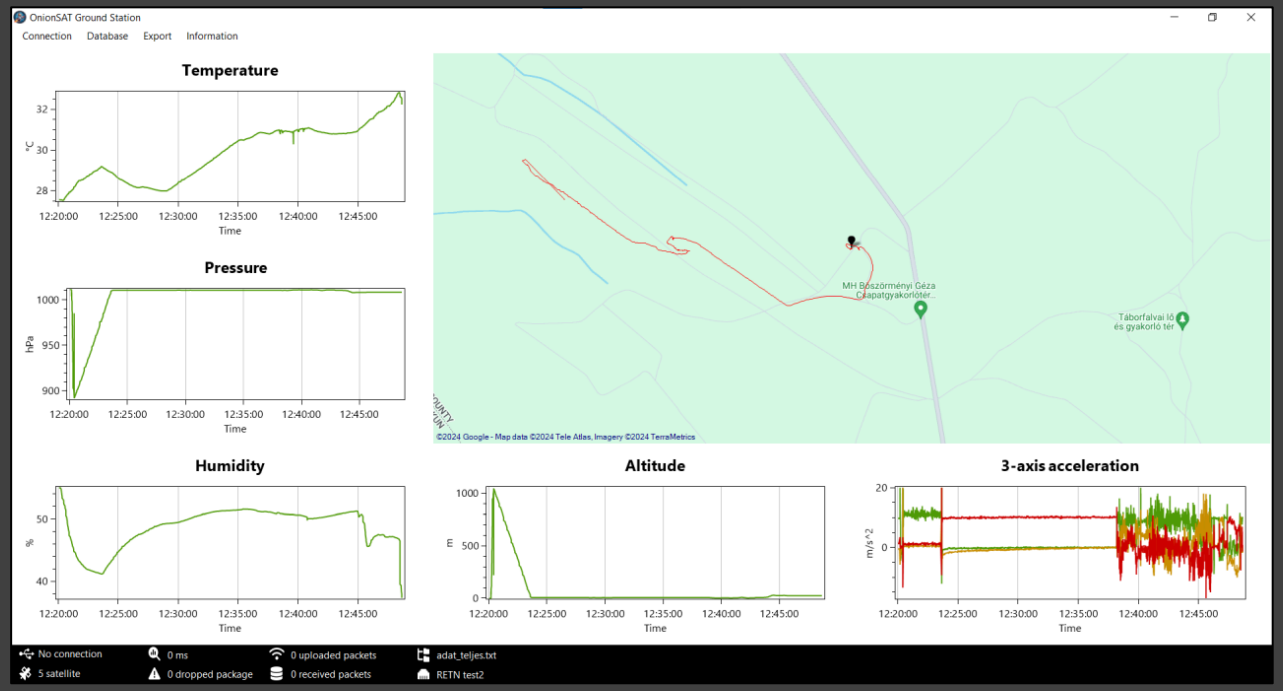
Three-axis accelero-meter

Arduino microcomputer

Antenna

Battery

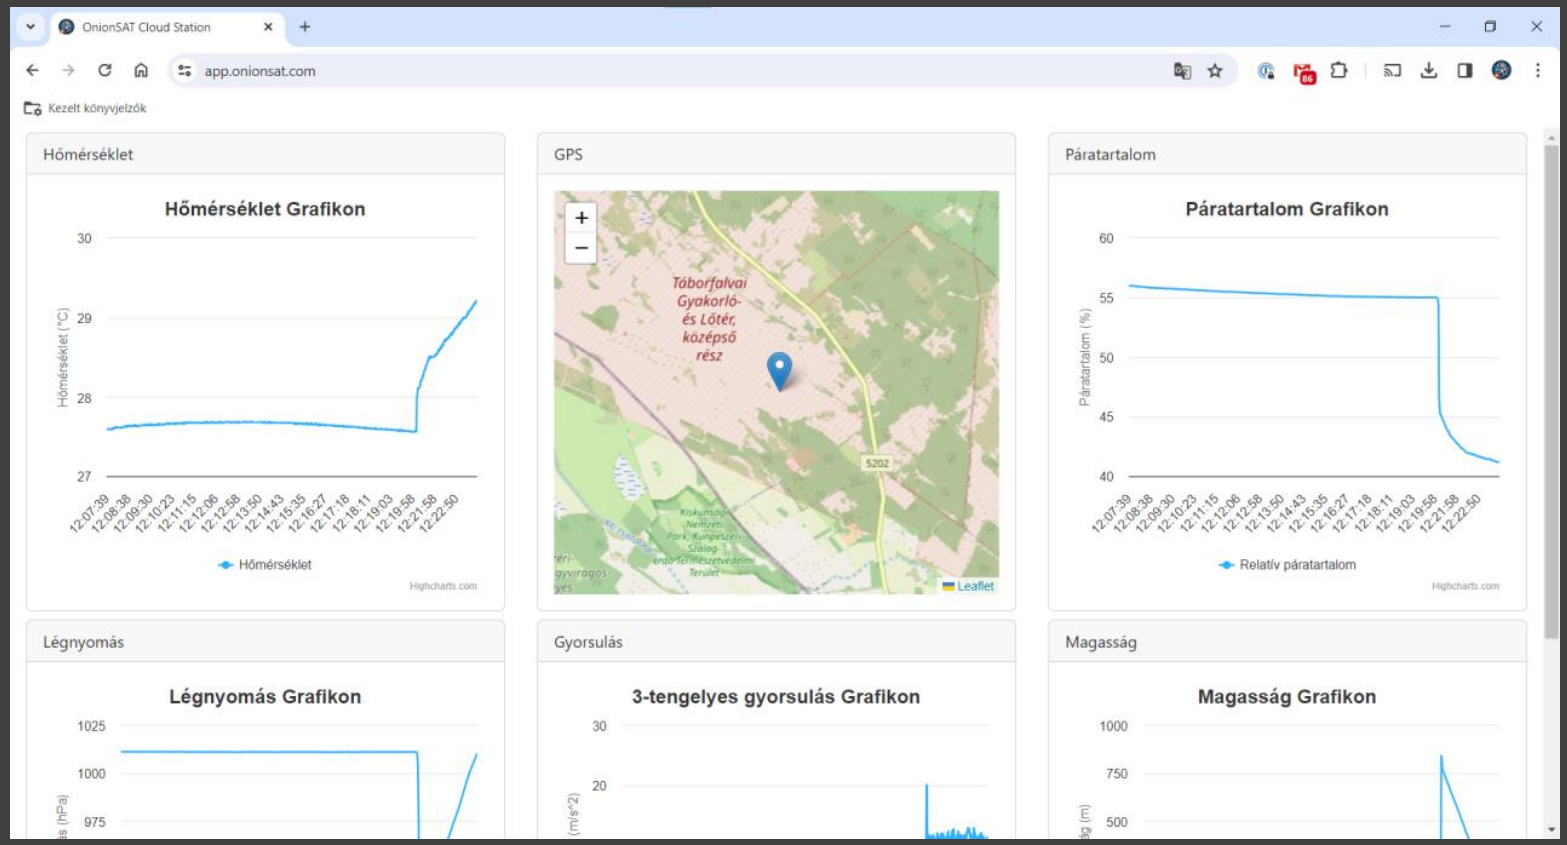
OnionSAT Software



Custom software

...in operation on 05/04/2024

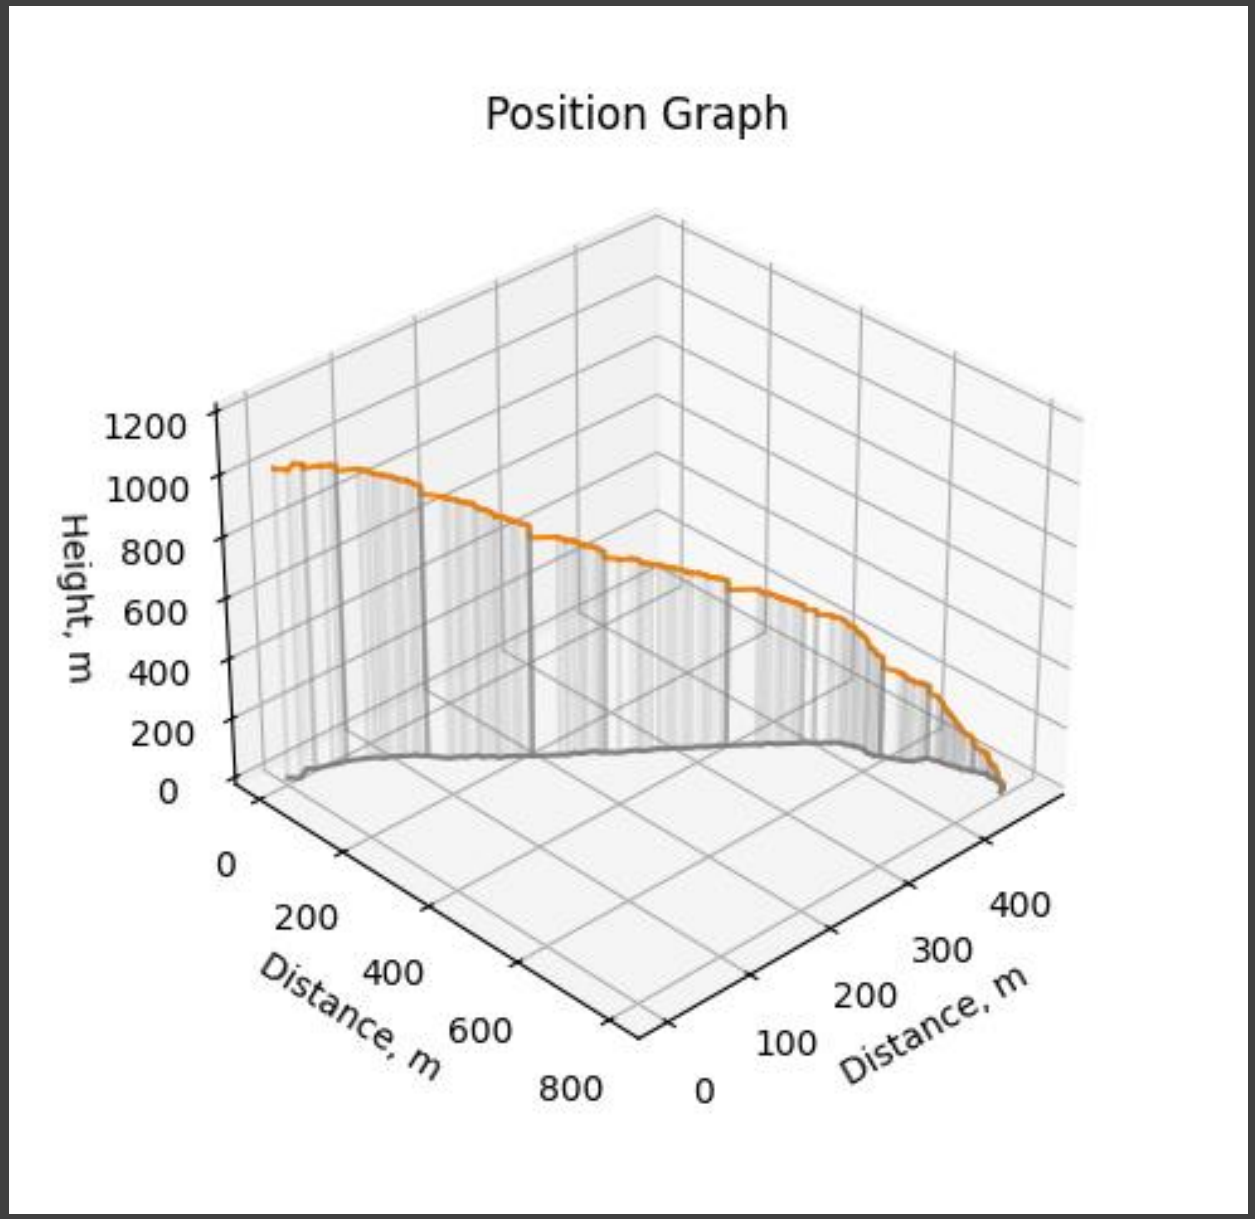
OnionSAT Software



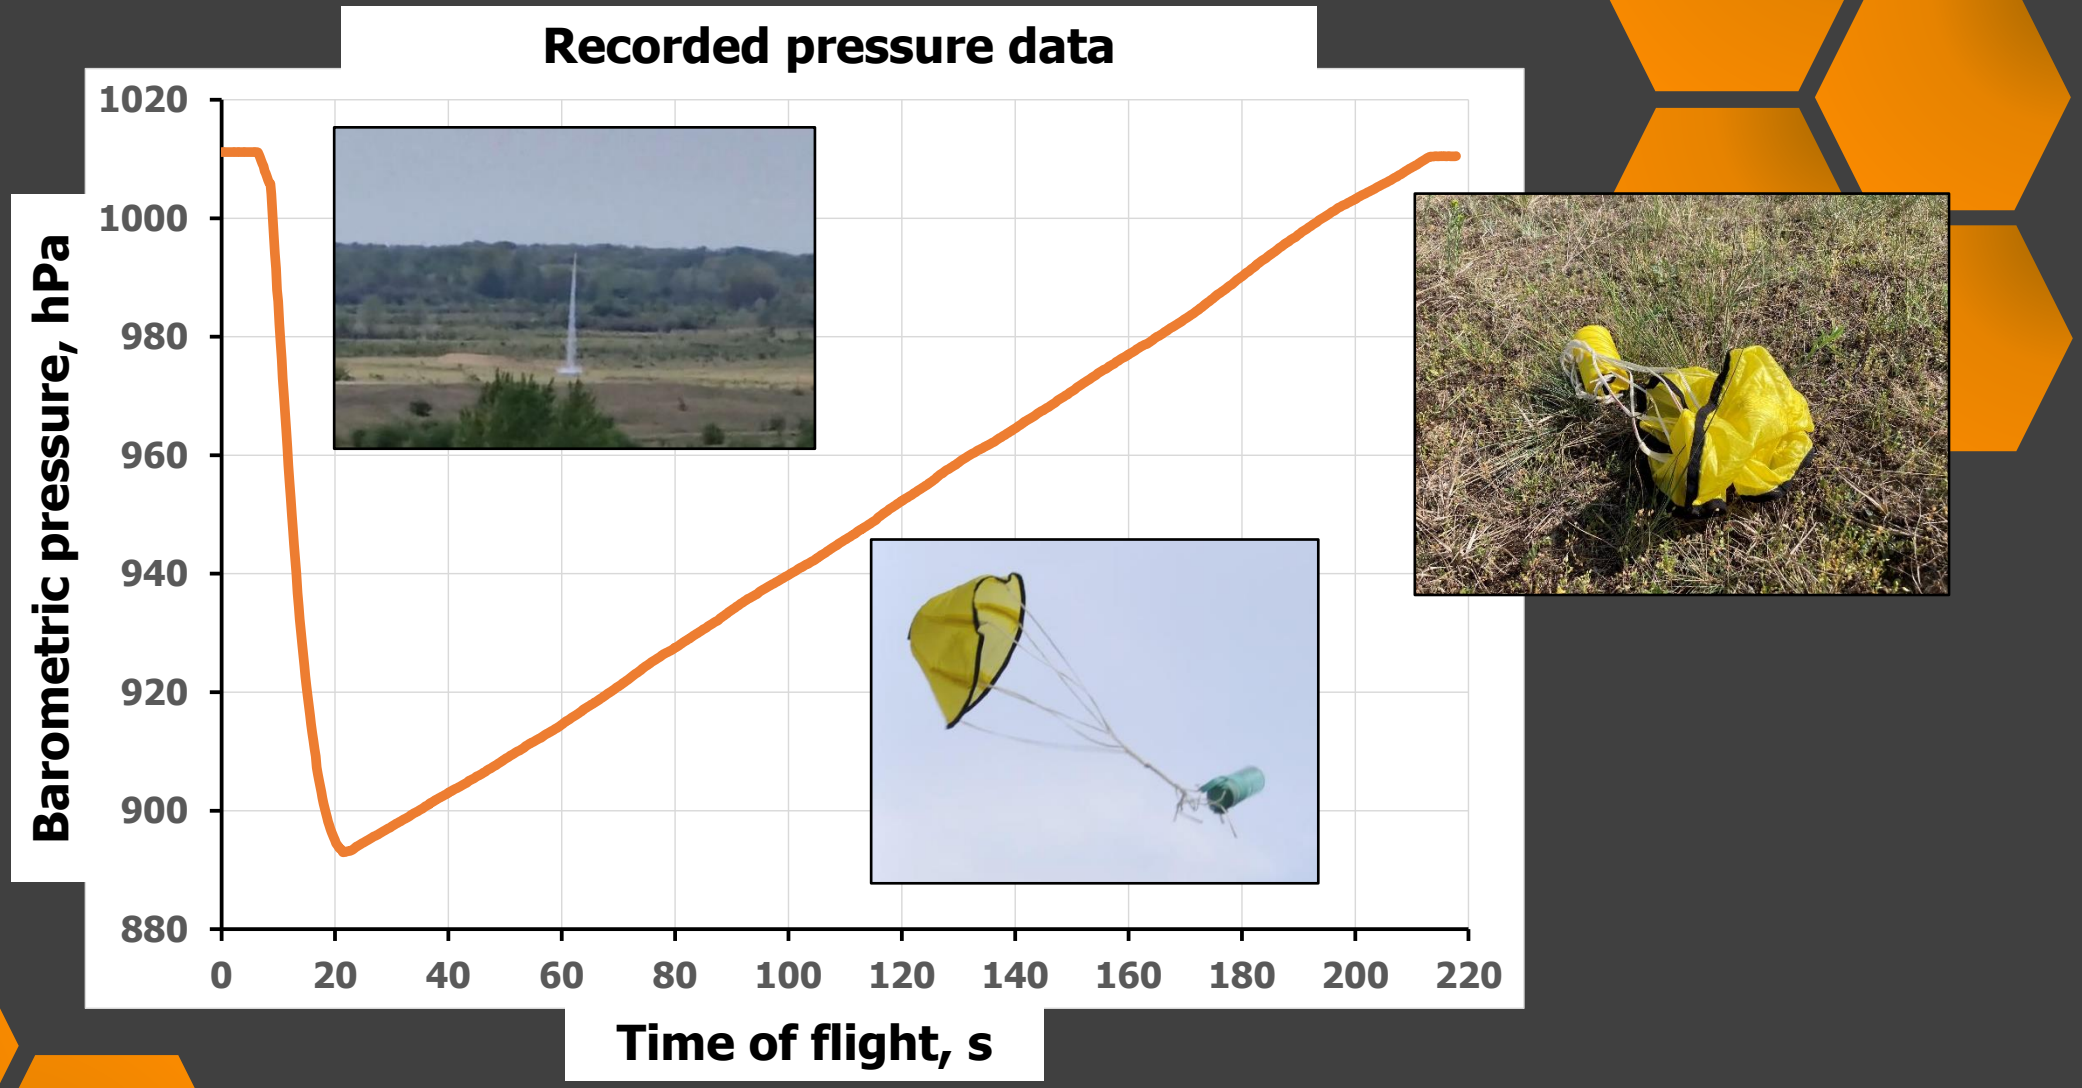
OnionSAT Cloud station:
online and real time event

Results #1

Flight direction:
~119° (NW)
Horizontal speed:
~17 km/h
Vertical speed:
~20 km/h



Results #2



Recorded pressure data
Barometric pressure, hPa

Conclusions:

- six months of cooperation
- three main and five minor versions
- lots of short-circuited parts
- tons of experience

Conclusions:

- successful launch, descent and touchdown
- five full sets of recorded and completely recovered ambient, positioning and acceleration parameters
- robust structure
